The time period for reply, if any, is set in the attached communication.

Office Action Summary**Application No.**

09/930,756

Applicant(s)

WAKAHARA, TATSUYA

Examiner

GELEK TOPGYAL

Art Unit

2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 April 2008.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 2, 4-6, 8-10, 12-14, 18-25, 28, 31, 32, 34 and 55 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1, 2, 4-6, 8-10, 12-14, 18-25, 28, 31, 32, 34 and 55 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☒ The drawing(s) filed on 12 February 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 4/15/2008 have been fully considered but they are not persuasive.
2. In re pages 11-12, the applicants argue the central point that the newly added limitation that the "currency symbol is displayed in a user-selectable button that is operable to initiate analog recording and which indicates that it is operable to initiate recording." Is not met by the collective references used for the rejection of independent claims 1, 5, 9, 13, 34 and 55.
3. In response the examiner respectfully disagrees. It is well known and old in the art to be able to label a user selectable button with symbols (for ratings, favorites, and/or the requirement of a fee). The present combination of Wonfor and Knee teaches a system that allows for payment of a fee for analog recording (as discussed in the previous rejection dated 12/12/2007), Official Notice is taken hereforth to expand upon the user-selectable button of Knee (Fig. 23, "Yes" button) to include the known ability to label buttons with a symbol, i.e. a currency symbol. Furthermore, it should be once again noted that the system of Wonfor already allows for the system's GUI PPV service to include a verification system such as a Yes/No buttons. The Yes button is "operable to initiate recording" as claimed.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 1-2, 5-6, 9, 10, 13, 14, 18-23, 25, 32, 34 and 55** are rejected under 35 U.S.C. 103(a) as being unpatentable over Wonfor et al. (US 6,381,747) in view of Knee et al. (US 6,014,184).

Regarding claim 1, Wonfor et al. teaches an information processing device, characterized by comprising:

judging means for judging whether restriction on recording is imposed on a program which a user desires to watch and listen to (Tables 1-2 and col. 5, line 58 through col. 6, line 26 teaches a conditional access system module 38 that receives copy protection control information. The CPU 40 then controls the con access system module 38 to determine the contents of the copy protection control information);

analyzing means for analyzing the restriction if it is judged by said judging means that the restriction on recording is imposed on the program (Tables 1-2 and col. 5, line 58 through col. 6, line 26 teaches a conditional access system module 38 that receives copy protection control information. The CPU 40 then controls the con access system module 38 to determine the contents of the copy protection control information); and

display control means for controlling a display to display on a screen a message concerning an analysis result of said analyzing means, (Col. 11, line 45+ teaches that a user interacts and "selects the "pay-to-tape option"". It's inherent that a pay per view service has a GUI, and with the ability of the user to select an option to pay to record a PPV program, a message concerning the payment has to have been displayed as well);

when said analysis result indicates that analog recording requires payment of a fee said display control means controls said display to display a currency symbol to indicate that analog recording requires payment of a fee, said currency symbol being displayed in a user-selectable area that is operable to initiate analog recording (Col. 11, line 45+ teaches that a user interacts and "selects the "pay-to-tape option"". It's inherent that a pay per view service has a GUI, and with the ability of the user to select an option to pay to record a PPV program, a message concerning the payment has to have been displayed as well. In order for the customer to purchase or cancel the recording, buttons/symbols (e.g. "Yes", "No" buttons) must be displayed so that the customer can select that particular function. The selection of a "Yes" button allows for the system to initiate recording, therefore the newly added limitation of "indicating that the button is operable to initiate recording is also met by Wonfor. However, Wonfor et al. fails to teach wherein a currency symbol is displayed in a button on a GUI);

In an analogous art, Knee et al. teaches in Figures 23, 24 and 24a, of a typical pay per view service that teaches the displaying of a button (Fig. 23, "Yes/No" buttons) and currency symbol (" \$" in Figures 23, 24 and 24a).

It should be noted [emphasis added] that Wonfor et al. already teaches the ability to display a screen (as discussed above) to so that a user a "initiate analog recording" (i.e. "pay-to-tape" of Wonfor et al), and that Knee provides the deficiency of displaying a "currency symbol" in the user-selectable area to initiate analog recording.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the ability to display a currency symbol as

taught in Knee et al. into the system of Wonfor et al. so that a user is aware of the cost of analog recording a program.

However, the proposed combination of Wonfor et al. and Knee et al. does not particularly teach wherein the currency symbol is displayed in a user selectable button.

It is well known and old in the art to be able to label a button with symbols (for ratings, favorites, and/or the requirement of a fee). The present combination of Wonfor and Knee teaches a system that allows for payment of a fee for analog recording (as discussed above), Official Notice is taken hereforth to expand upon the user-selectable button of Knee (Fig. 23, "Yes" button) or the button of Wonfor et al to include the known ability to label buttons with a symbol, i.e. a currency symbol.

It would have been obvious to one of ordinary skill in the art at the time the invention was made label a button with a currency symbol into the proposed combination of Wonfor and Knee so that a user is aware that a payment is required to record a particular program

Regarding claim 2, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 1 above, furthermore, Wonfor et al. teaches the claimed wherein in accordance with each of a case where said analyzing means determines that analog recording is released by paying an additional fee (as discussed in claim 1 above), a case where said analyzing means determines that analog recording is allowed, but digital recording is not allowed (as discussed above in claim 1, and additionally, Wonfor only allows the programs to be stored in a magnetic tape and teaches in Fig. 2, between elements 10 and 24, that the video to be recorded

is an analog video output) and a case where said analyzing means determines that neither analog recording nor digital recording is allowed, said display control means controls the display on the screen to make the user recognize the respective cases (Col. 11, lines 45-53 and Table 2 teaches situations where any type of recording of the program is prohibited, therefore, a digital copy and analog copies are prohibited altogether).

Claims 5-6 and 9-10 are rejected for the same reasons as discussed above in claims 1 and 2, respectively, because a device inherently uses methods to accomplish its' tasks.

Claim 13 is rejected for the same reasons as discussed in claim 1 above, and additionally, Wonfor et al. teaches a display (Fig. 2, TV displays 22 and 28), and teaches a microcontroller (met by CPU 40 in the discussion of claim 1 above).

Regarding claim 14, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches in Fig. 2 of a Digital PPC Set Top Box 10 that receives the broadcast programs.

Regarding claim 18, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said display is adapted to display said program (Fig. 2, TV 22) and said instructions further comprise instructions for causing said processor to perform said identifying, said analyzing and said controlling steps before said display of said program (A CPU 40 processes the copy control information (as discussed above in

claim 13) before the program is displayed. In a PPV service, the conditions as listed in Table 2 are processed prior to the viewing/recording of the program).

Regarding claim 19, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said program requires paying money for said display of said program (Col. 11, lines 45-54 teaches that a user is billed for purchasing a program for a display purpose).

Regarding claim 20, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said system further comprises a recorder adapted for copying said program (A recorder 24 in Fig. 2 is adapted to copy the program.) and said instructions further comprise instructions for causing said processor to perform said identifying, said analyzing and said controlling steps before said copying of said program (A CPU 40 processes the copy control information (as discussed above in claim 13) before the program is displayed. In a PPV service, the conditions as listed in Table 2 are processed prior to the viewing/recording of the program).

Regarding claim 21, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said program requires paying money for said copying of said program (Col. 11, lines 53-65 teaches that a user is billed for purchasing a program for a recording purpose).

Regarding claim 22, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said instructions further comprise instructions for causing said processor to perform the step of controlling said display to display a menu containing interactive prompts for receiving said person's input (As discussed in claim 13 above (via claim 1), an inherent feature of a PPV purchase transaction includes a GUI interface, which has menus and interactive prompts).

Regarding claim 23, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, and furthermore, Wonfor et al. teaches the claimed wherein said prompts include a prompt for said person to acknowledge the presence of said copy-protected data within said program (As discussed above in claim 13 (via claim 1), when a user decides to purchase the ability to copy the program, he has acknowledged the copy protection information).

Claim 25 is rejected for the same reasons as discussed in claim 18 above, since user can pay to view or record the program.

Claim 32 is rejected for the same reasons as discussed in claim 13 above, when the display shows the options to select a program for viewing/recording, the system has been controlled to display the copy protection information.

Claim 34 is rejected for the same reasons as discussed in claim 13 above, because a device inherently uses methods to accomplish its' tasks.

Claim 55 is rejected for the same reasons as discussed in claim 13 above, because a device inherently uses methods to accomplish its' tasks.

6. **Claims 4, 8, 12 and 31** are rejected under 35 U.S.C. 103(a) as being unpatentable over Wonfor et al. (US 6,381,747) in view of Knee et al. (US 6,014,184) as applied to claim 1 and 5 above, and further in view of Tsutsumi (US 5,737,477).

Regarding claim 4, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 1 above, furthermore, Wonfor et al. teaches a system where the copy protected information is displayed on the screen, but fails to particularly teach that the message is displayed for a predetermined time.

In an analogous art, Tsutsumi teaches of a system where a message displayed to a user via a display unit is removed from the display unit after a certain period of time (col. 5, lines 36-41).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to display a message on a display unit for only a predetermined time to increase user friendliness so that the user can continue to watch the program that was disturbed due to the display of the message.

Claim 8 is rejected for the same reasons as discussed above in claim 4 because a device inherently uses methods to accomplish its' tasks.

Claim 12 is rejected for the same reasons as discussed above in claim 4.

Regarding claim 31, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 13 above, furthermore, Wonfor et al. teaches a system where the copy protected information is displayed on the screen, but fails to particularly teach that the message is displayed for a predetermined time.

In an analogous art, Tsutsumi teaches of a system where a message displayed to a user via a display unit is removed from the display unit after a certain period of time (col. 5, lines 36-41).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to display a message on a display unit for only a predetermined time to increase user friendliness so that the user can continue to watch the program that was disturbed due to the display of the message.

7. **Claim 24** is rejected under 35 U.S.C. 103(a) as being unpatentable over Wonfor et al. (US 6,381,747) in view of Knee et al. (US 6,014,184) as applied to claim 22 above, and further in view of Alten et al. (US 5,781,246).

Regarding claim 24, the proposed combination of Wonfor et al. and Knee et al. teaches the limitations as discussed in claim 22 above, furthermore, Wonfor et al. teaches that a program can be viewed and recorded, but fails to specifically teach that while watching a program, the user has the ability to cancel viewing the program or cancel displaying of said information.

In a related art, Alten et al. teaches that while watching a certain channel, a user can change the channel by entering a channel number by way of a keypad or by using channel up/down buttons. When the user changes the channel, the program being viewed is no longer displayed on the screen, and thereby cancelled for viewing (col. 12, lines 43-54).

A user is able to maneuver through numerous channels by way of a remote control with channel changing buttons. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the ability to change channels into Wonfor et al.'s system to increase user friendliness by giving the user an option to watch what he wants at any given time.

8. **Claim 28** is rejected under 35 U.S.C. 103(a) as being unpatentable over Wonfor et al. (US 6,381,747) in view of Knee et al. (US 6,014,184) as applied to claim 13 above, and further in view of Horlander et al. (US 6,507,953).

Regarding claims 28, Wonfor et al. teaches in his system of prohibiting recording of desired programs, but he fails to expressly disclose that the recording can be of analog or digital format.

Horlander teaches in col. 10, lines 14-42 of copyright data that prohibits the following recordings: digital (33h), analog (31h), and neither digital nor analog (34h). Having a digital copy of a program allows a user to make non-deteriorating copies. Such a situation is unfavorable from the viewpoint of copyrights. The quality of an analog copied program will not be long lasting, and thereby inhibit more copies made in future due to the deteriorating data stored on the magnetic tapes. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Wonfor et al. to classify the type of allowable recordings into analog, digital, and neither.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GELEK TOPGYAL whose telephone number is (571)272-8891. The examiner can normally be reached on 8:30am -5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on 571-272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2621

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
